HON. MICHAEL JORDAN CASTILLO

Barangay Chairman

Barangay 160, Tondo, Manila

We are a group of student researchers conducting a research study involving the development and evaluation of an enhanced algorithm designed to improve the processing, prioritization, and analysis of barangay-related data.

In line with this research, we would like to respectfully request access to an appropriate **household-level dataset from Barangay 160, Tondo, Manila** for research, testing, and evaluation purposes.

Specifically, we would like to request data containing the following information, if available:

- **Household Number or Household ID**
- **Number of individuals in each household**
- Whether the household has a **Senior Citizen**
- Whether the household has a **Person with Disability (PWD)**
- Other relevant, non-sensitive household information that the Barangay may deem appropriate and permissible to provide

We would like to clarify that **we do not require the names, addresses, contact numbers, or other personally identifiable information of individual residents**. A household number or anonymized household ID would be sufficient for our research purposes. The requested information will primarily be used to identify and classify household characteristics relevant to the implementation and evaluation of our proposed algorithm.

We assure the Barangay that any data provided will be used **strictly for academic and research purposes only**. We will observe appropriate data privacy, confidentiality, and data security measures throughout the conduct of the study. Any information that could directly or indirectly

identify an individual will not be disclosed, published, or distributed. If necessary, the dataset may be anonymized or provided in an aggregated form before being used for research.

We understand that the release of barangay data is subject to the policies, requirements, and approval of the Barangay. We are willing to comply with any documentation, conditions, data-use agreements, or data-handling procedures that may be required by the Barangay.

Access to this dataset would be highly valuable to the completion and validation of our research, particularly in allowing us to test our enhanced algorithm using data that accurately represents an actual barangay setting. The household-level information regarding the presence of senior citizens and PWDs is particularly relevant to the criteria and prioritization mechanisms incorporated into our proposed algorithm.

We sincerely hope for your favorable consideration of this request. We greatly appreciate your time and support for student research and academic development.

Respectfully yours,

JAMILLAH GUALIL
